Executive Summary

Our market agency's goal is to help our client, Marriott to achieve their business objectives by completing the research aims as listed in the client brief. Marriott International aims to expand its global presence through acquisitions, franchise development as well as partnerships. Marriott hopes to enhance guest experiences with them through technology and personalised services. Marriott remains committed to sustainability measures with goals to reduce its environmental impact and to support local communities. They want to learn how sustainability measures can affect customer loyalty and want to identify emerging hotspots to grow their global presence.

Exploratory research takes place via focus groups and literature review is done to gain insights from customers and this information is used for descriptive research. Descriptive research uses an online questionnaire to collect primary data for data analysis. In addition to this, secondary data will be collected from Marriott's customer database.

Sample size is derived from statistical formulas. After a frame consisting of Marriott and non-Marriott customers is established, proportionate stratified sampling is used to get a segmented sample.

Statistical methods such as Multiple Linear Regression will be used to derive insights from customer preferences. Two-way ANOVA is used to examine the effects of 2 or more independent variables on a dependant variable. Cluster analysis is used to group similar customers into segments based on their characteristics.

Introduction

Background

Marriott International is one of the world's largest hospitality companies with a rich history and a diverse portfolio. It was founded in 1927 by J. Willard Marriott and Alice S. Marriott. It has grown from a root beer stand in Washington to a global giant in the hospitality industry, bringing in \$25.1 billion in revenue in 2024.

Marriott International operates 30 brands, including:

- Luxury: Bulgari Hotels & Resorts, The Ritz-Carlton, The Luxury Collection, EDITION, JW Marriott, W Hotels, St. Regis, and Waldorf Astoria Hotels & Resorts.
- Premium: Marriott Hotels, Sheraton, Le Méridien, Renaissance Hotels, and Westin.
- Select: Courtyard by Marriott, Fairfield by Marriott, SpringHill Suites by Marriott, Residence Inn by Marriott, and TownePlace Suites by Marriott

Marriott's main competitors include other global hospitality powerhouses such as Hilton, Accor and Hyatt, which is why Marriott aims to increase its global presence. It has over 9000 properties in over 141 countries. Marriott wishes to better understand guest preferences for personalised services and technology integration as well as the impact of sustainability measures on customer loyalty.

Problem Definition

Now that we have established the aims of Marriott, we will now discuss the problems that Marriott faces. The hospitality industry is highly competitive, with shifting consumer behaviours and preferences driven by technological advancements, economic conditions, and sustainability concerns. This means that Marriott must continuously innovate to maintain its leadership position.

In order to expand their global presence amid growing competition from its competitors such as Hilton, Marriott wishes to identify emerging travel trends and destination hotspots to better cater to the travellers. In addition, Marriott wants to explore how sustainability measures will affect customer loyalty. They are also looking into the effectiveness of the current loyalty program, Bonvoy. Economic factors influencing travel behaviour is another important point of interest for Marriott. Marriott

wants to assess its guest satisfaction across its brands to learn how to improve its service quality and customer satisfaction in this highly competitive hospitality industry. This will allow the company to adapt to evolving market conditions. Through addressing these research problems, Marriott will be able to strengthen its position as one of the best hospitality companies in the world.

Research Aims

From the client brief, we can see the three research aims that Marriott expects the research to reach:

- RA1: Research guest preferences for personalised services and technology integration
- RA2: Research travel trends and destination hotspots and guest satisfaction across brands
- RA3: Research impact of sustainability measures on customer loyalty and the effectiveness of their existing Bonvoy loyalty program. In addition, how does economic factors influence travel behaviours.

Research Questions and Hypothesis

For RA1, the research questions are:

1. **RQ 1.1:** What are the key factors influencing customer preferences for personalized services and technology integration in hotels?

For RQ 1.1, the research hypothesis is:

- a. RH1.1: Customers prefer convenience, a seamless stay experience, a good digital experience and personalized customisation.

2. **RQ 1.2:** How do these preferences vary across different demographic segments?

For RQ 1.2 the research hypothesis is:

- a. RH1.2: Younger travellers (millennials and Gen Z) have a stronger preference for digital check-ins since they have grown up with technology and AI-driven services compared to older demographics.

For RA2, the research questions are:

1. **RQ2.1:** What are the emerging travel trends influencing customer decisions?

For RQ 2.1, the research hypothesis is:

- a. RH2.1: Sustainable tourism, remote work accommodations, and wellness-focused travel are among the most sought-after trends.

2. **RQ2.2:** Which regions are seeing an uptick in travel destinations among travellers?

For RQ 2.2, the research hypothesis is:

- a. RH2.2: Destinations with eco-friendly tourism initiatives and family-friendly policies will experience higher demand.

3. **RQ 2.3:** Are there significant differences in overall guest satisfaction across different Marriott brands?

For RQ 2.3, the research hypothesis is:

- a. Guest satisfaction levels are significantly higher for luxury brands compared to premium and select-service brands, with specific service attributes driving these differences (e.g., service attentiveness, room quality, amenities)

4. RQ 2.4: Are there significant regional variations in guest satisfaction within the same Marriott brand?

For RQ 2.4, the research hypothesis is:

- a. Regional variations in guest satisfaction exist within the same brand, caused by cultural differences in service expectations and operational consistency across different regions within the same brand.

For RA3, the research questions are:

1. RQ3.1: How do sustainability initiatives affect customer loyalty and booking decisions?

For RQ 3.1, the research hypothesis is:

- a. RH3.1: Travelers who prioritize sustainability are more likely to choose Marriott hotels as their holiday hotel since they are prominent in implementing green initiative measures.

2. RQ 3.2: Which specific sustainability initiatives are most valued by Marriott customers and contribute most significantly to loyalty?

For RQ3.2, the research hypothesis is:

- a. Initiatives focused on reducing environmental impact (e.g., waste reduction, energy efficiency) are more valued by customers and have a stronger positive impact on loyalty compared to other initiatives.

3. RQ3.3: How effective is the Bonvoy rewards program in retaining customers?

For RQ3.3, the research hypothesis is:

- a. Frequent travellers who actively use the Bonvoy program would highly prefer Marriott hotels to stay at when they are traveling.

4. RQ3.4: How can the loyalty program be improved?

For RQ3.4, the research hypothesis is:

- a. Personalised rewards can be given to loyal customers which encourages more sign ups for their Bonvoy loyalty program and special perks can be given to very loyal customers with redemption rewards for getting a certain number of points in the Bonvoy loyalty program.

Addressing Marriott's Business Objectives

The research hypotheses can help Marriott to achieve their important aims from this research task. One of Marriott's main goals is to improve the guest experience across its brand which are spread out over any regions.

- Personalisation and technology integration
 - ~ By understanding customer preferences for personalisation and technology integration during their stay at their hotels, Marriott can learn what the guests expect and look forward to in their stay such as unique tailored in-person and e-services they can use and enjoy. These kinds of unique experiences for guests may make them feel like more welcomed to Marriott hotels and can encourage them to continue their patronage of the Marriott brand. This is in line with Marriott's goal of customer loyalty as well as their aim of elevating the guest experiences for all their customers.
- Emerging travel trends and destination hotspots
 - ~ By researching on how travel trends evolve and identifying destination hotspots, Marriott can stay one step ahead of its competitors by being more proactive and establishing itself in these emerging destination hotspots before their competitors. This allows Marriott to grow its global presence and establish itself as one of the best hospitality chains in the world. This strategic advancement allows Marriott to continue its acquisitions in that area to secure the market for its brand.

~ More and more people are travelling solo to their holiday destinations. Marriott can seize this opportunity by offering tailored travel packages for these tourists to enjoy their holiday. They can also offer group tour packages to enable these solo tourists to meet other like-minded people in their travels.

- Sustainability and Loyalty

~ One of Marriott's goals is to learn the impact of sustainability measures in customer loyalty. People are becoming more conscious in their eco footprint when travelling. By becoming more eco- friendly and increasing the number of sustainability measures that Marriott embarks on, customers will take notice and be more inclined to support a business that aligns with their values of leaving a smaller eco footprint. This may lead to people choosing Marriott even when given an option of multiple hotels to stay at during their travels. It will also establish Marriott as a responsible leader of the hospitality industry giants since they also care about the eco footprint that their plethora of chain hotels may leave.

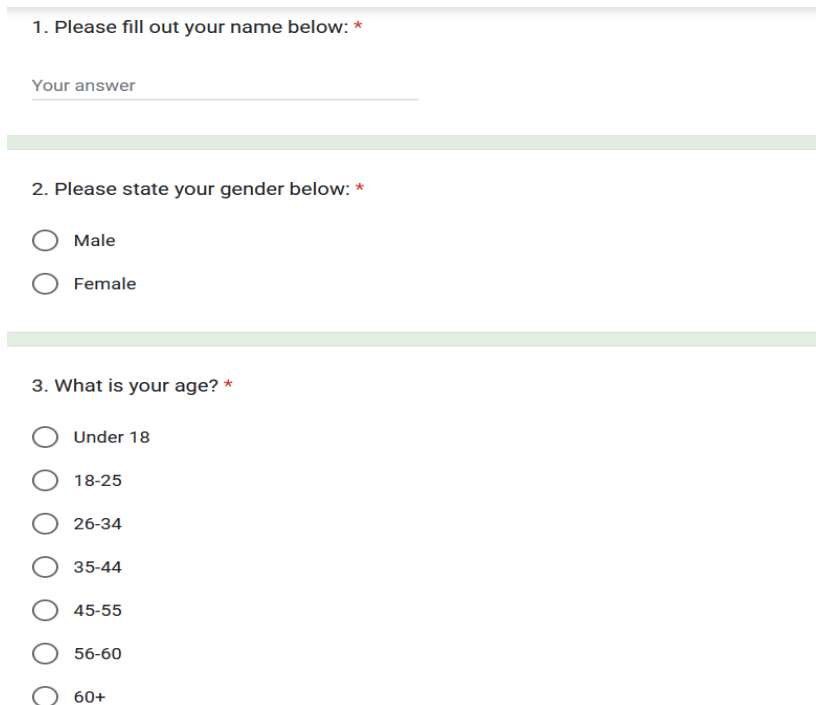

~ Reassessing their existing Bonvoy loyalty program to attract more customers can also be a good move. They can improve the perks offered via the loyalty program to attract more people to sign up and be a Marriott loyalty program member. They can also strategically partner with more brands that are becoming popular to incentivise people to sign up for their Bonvoy loyalty program. They can also offer redemption points towards their purchases with those brand that may offer discounts or other dining vouchers at restaurants in popular destinations.

Research Design

Exploratory research is conducted via online focus groups to gather insights on personalised services and technology integration, identifying emerging travel trends and destination hotspots, and assessing guest satisfaction across Marriott's different hotel chains. These factors are explained in RQ 1.1, RQ 2.1, RQ 2.2 and RQ 3.1 where these questions explore possibilities in customer perceptions. This research will explore the impact of sustainability initiatives by Marriott on customer loyalty and will evaluate the effectiveness of their loyalty

program. In addition, it will also focus on getting a better understanding of how economic factors influence travel behaviour among guests.

The descriptive phase of the research will dive into customer demographics and their opinions on personalised services, technology integration and sustainability efforts put forth by Marriott, via an online questionnaire. The questionnaire also collects information on guest travel preferences and behaviours and their satisfaction with Marriott and its loyalty program. The data from this questionnaire will be analysed using a variety of multivariate statistical techniques and the results of this research will be used to develop recommendations on how Marriott can improve its services provided and to enhance their programs to better meet the wants and needs of customers.

1. Please fill out your name below: *

Your answer

2. Please state your gender below: *

☐ Male

☐ Female

3. What is your age? *

☐ Under 18

☐ 18-25

☐ 26-34

☐ 35-44

☐ 45-55

☐ 56-60

☐ 60+

Figure 1: The demographic questions in the questionnaire

4. Have you stayed in one of the following places in the last 5 years? *

- ☐ Marriott
 - ☐ Courtyard by Marriott
 - ☐ SpringHill Suites by Marriott
 - ☐ The Ritz-Carlton
 - ☐ Bulgari Hotels & Resorts
 - ☐ Other: _____
-

5. Where do you currently stay?

- ☐ North America
- ☐ South America
- ☐ Asia
- ☐ Africa
- ☐ Europe

Figure 2: The geographic questions in the questionnaire

The demographic and geographic data of Marriott and non-Marriott customers can be obtained from Marriott's customer database. More recent and updated information can be obtained from the questionnaire above (Figure 1 and 2). An online questionnaire is preferred since it allows for faster data collection, low cost involved and it is easier and more convenient for customers to fill out on the go.

Figure 7: Sustainability measures questions

The online questionnaire serves to collect responses from Marriott guests on their expectations (Figure 3,4 & 5) and their attitude towards the sustainability measures put forth by Marriott (Figure 7).

Online focus groups will serve as the initial phase, aiming to uncover in-depth customer perceptions, needs, and desires compared to Marriott's offerings. This is crucial for understanding the "why" behind customer behaviour, which quantitative methods might potentially miss. Online focus groups allow its participants to express their views freely in an environment they are familiar and comfortable with. Online focus groups also have a lower cost due to being online.

Fieldwork and Data Collection

Sampling Methodology

The target population for the online questionnaire is frequent travellers. The sampling frame includes Marriott customers who have stayed at Marriott in the last 5 years as well as non-Marriott customers who are in the Marriott customer database and external panel customer database respectively. Their email addresses are provided through these means for communication. A probability-based approach will be used. Stratified sampling will ensure representation across customer populations. By ensuring a diverse and representative sample, it will enhance the reliability of the research.

Proportionate stratified sampling using 'type of traveller' is useful since we can sample a large number of Marriott and non-Marriott customers. This sampling method is easy to achieve since the information already being available in the customer databases. Judgemental sampling is useful for the focus group participation since it is attributed with low costs and time consumed. This sampling still yields a good representative sample of the travellers.

Proposed sample size

A confidence interval made from the mean willingness of travellers to pay for hotel accommodation can be constructed to learn about traveller's reaction towards the price of hotel accommodation.

The sample size for the confidence interval above is as follows:

For a $100(1 - \alpha)\%$ confidence interval, we use:

$$\frac{Z_{\alpha}}{2} \times \frac{\sigma}{\sqrt{n}} \leq e$$

$$n \geq \frac{\left(\frac{Z_{\alpha}}{2}\right)^2 \times \sigma^2}{e^2}$$

$$\frac{Z_{\alpha/2}}{2} \times \sqrt{\frac{\pi(1-\pi)}{n}} \leq e$$
$$n \geq \frac{(Z_{\alpha/2})^2 \pi(1-\pi)}{e^2}$$

From the formula, we set a significance level of $\alpha = 0.05$ to get a 95% confidence level which leads to us getting $\frac{Z_{\alpha}}{2} = 1.96$. The precision level of $e = 0.05$, which ensures that the estimated

population proportion is within 5%. If we use $\pi = 0.5$ to maximise the sample size, we can get a calculation of about 384.16, which is rounded to 385.

Since the proposed sample size is below the recommended minimum of 5000 Marriott customers, we have to consider Marriott's market share of 15% in Q4 of 2024 (CSI Market). We also have to take note of 18% of people who travel often in the USA (Statista) and the average response rate of online questionnaire at 44.1% (Science Direct).

While keeping in mind the final sample of 5000 Marriott customers who completed the survey, according to the market share of Marriott, the final sample size calculates to:

$$\text{Final Sample Size} = \frac{\text{Final Sample size of Marriott Customers}}{\text{Percentage of Marriott Market Share}} = \frac{5000}{0.15} \approx 33334.$$

It is important to note that 15% of this final sample size will amount to 5000 Marriott customers while the remaining 85% will be 33,334 non-Marriott customers. The initial sample size is based on:

$$\begin{aligned} \text{Marriott Customers Initial Sample Size} &= \frac{\text{Final Sample Size}}{\text{Incidence Rate} * \text{Completion Rate}} = \frac{5000}{1 * 0.441} \\ &\approx 11,338 \end{aligned}$$

Non – Marriott Customers Initial Sample size =

$$\frac{\text{Final Sample Size}}{(\text{Proportion of frequent travelers}) * \text{Completion Rate}} = \frac{33334}{0.18 * 0.441} \approx 419930$$

$$\text{Initial Sample Size} = 11338 + 419930 = 431268$$

In summary, as part of the research proposal, a total of 431,268 emails with links to the online questionnaire would have to be sent with 11,338 addressed to Marriott customers and the remaining 419,330 sent to non-Marriott customers.

Proposed Data Analysis Methods

RQ1.1 & RQ1.2 | Multiple Linear Regression (MLR)

Research Questions Addressed:

RQ1.1: What are the key customer preferences for personalized services and technology integration in the hospitality sector?

RQ1.2: How do these preferences vary across different customer segments (leisure vs. corporate)?

MLR is suggested for these questions since it examines the relationship between a dependant variable and multiple independent variables. For these questions, the MLR equation is as follows:

Customer Satisfaction

$$= \beta_0 + \beta_1(\text{Tailored Offers}) + \beta_2(\text{Pre Arrival Customization}) + \beta_3(\text{Mobile Check In}) + \beta_4(\text{In Room Controls})$$

$\beta_1, \beta_2, \beta_3, \beta_4$ are the regression coefficients for independent variables which represents the change in customer satisfaction for a one-unit increase in the independent variable while keeping the other variables constant. 'Tailored Offers', 'Pre-Arrival Customization', 'Mobile CheckIn' & 'In Room Controls' are independent variables that represent different attributes of personalized services and technology integration, measured using Likert scales in the questionnaire. β_0 is the intercept. A F-test is performed to test the statistical significance of this research model at $\alpha = 0.05$. This determines if it is good to conduct a MLR analysis.

	Unstandardized	Coefficient	Standardized		
Model	B	Std. Error	Beta	t	Sig.
1 (Constant)					
Tailored Offers					
Pre-Arrival Customization					
Mobile Check in					
In-room Controls					

Figure 8: Coefficients Table

An individual t test is performed to get the significance of the coefficients. If it is not significant ($p > 0.05$), the variable with the high p is removed and the analysis is restarted. This occurs until only the significant independent variables are left. These significant variables are assumed to be key factors which lead to customer satisfaction. R^2 Indicates the proportion of variance in customer satisfaction explained by the model. A higher R^2 value indicates a better model fit. Standardized coefficients (Beta values) allow for comparison of the relative importance of different independent variables.

Two-Way ANOVA

Research Questions Addressed:

RQ2.3: Are there significant differences in overall guest satisfaction across different Marriott brands (e.g., luxury, premium, select-service)?

RQ2.4: Are there significant regional variations in guest satisfaction within the same Marriott brand?

For these questions, we suggest the use of two way ANOVA since it is used to examine the effects of two or more categorical independent variables on a continuous dependent variable.

Source	Sum of Squares	df	Mean Square	F	Sig.	Partial eta Squared
Brand						
Region						
Brand * Region						
Error						
Total						

Figure 9: Test of Between-Subjects Effects table

P- values of <0.05 indicate statistically significant main effects or interaction effects. Partial eta-squared indicates the proportion of variance in the dependent variable (satisfaction) explained by each independent variable or their interaction (brand and region). Post hoc tests can be used to determine which specific pair of brand and regions have a high significance in terms of mean satisfaction scores.

Cluster Analysis

Cluster analysis is suggested since it is used to group similar objects into clusters based on characteristics.

Research Questions Addressed:

1. RQ3.1: How do sustainability initiatives affect customer loyalty and booking decisions?
2. RQ 3.2: Which specific sustainability initiatives are most valued by Marriott customers and contribute most significantly to loyalty?

Customers will be clustered (grouped) based on their responses to the questionnaire measuring their awareness and valuation of various sustainability initiatives implemented by Marriott (e.g., energy efficiency programs, waste reduction, etc).

	Ward Method	Attribute 1 (Support Sustainability vs Indifferent)	Attribute 2 (Waste Manageme nt vs Energy Saving)	...	Attribute 10 (Prefer Sustainability vs Indifferent)
1	Mean				
	N				
	Std Deviation				
2	Mean				
	N				
	Std Deviation				
3	Mean				
	N				
	Std Deviation				
Total	Mean				
	N				
	Std Deviation				

Figure 10: Ward's Method Table for RQ 3.1 and RQ 3.2

Using the Ward's Method Table, we are able to cluster customers into segments and this will allow for comparison and interpretation of segment differences. From this output, Marriott can identify

distinct customer segments based on their sustainability preferences. They can also Develop targeted sustainability initiatives that are most valued by key customer segments.

Questionnaire

Flow chart

Online Questionnaire

Marriott Survey

We are a marketing agency acting on behalf of our client, Marriott Hotels and Resorts , and are conducting this survey to better improve the service they provide in their hotels. We would appreciate you taking some time to give us your feedback.

1. Please fill out your name below: *

Short answer text

2. Please state your gender below: *

- ☐ Male
- ☐ Female

3. What is your age? *

- ☐ Under 18
- ☐ 18-25
- ☐ 26-34
- ☐ 35-44
- ☐ 45-55
- ☐ 56-60
- ☐ 60+

4. Have you stayed in one of the following places in the last 5 years? *

- ☐ Marriott
- ☐ Courtyard by Marriott
- ☐ SpringHill Suites by Marriott
- ☐ The Ritz-Carlton
- ☐ Bulgari Hotels & Resorts
- ☐ Other: _____

5. Where do you currently stay?

- ☐ North America
- ☐ South America
- ☐ Asia
- ☐ Africa
- ☐ Europe

6. Have you stayed in one of these places during the last 5 years?

- ☐ Hilton
- ☐ Hyatt
- ☐ Accor
- ☐ Four Seasons Hotels and Resorts
- ☐ Other: _____

7. I prefer a more personalised experience when i choose Marriott

More partners to be added to the program	☐	☐	☐	☐	☐
Better discounts with partners in the program	☐	☐	☐	☐	☐

You have reached the end of the survey with us. Thank you very much for your participation

Cost Breakdown

The total is \$1,050,000 USD.

Further Research

Competitor's Customer profiling

Obtaining profiles of competitor customers and their travel behaviours and service preferences may make help Marriott to better cater to a wider customer pool. Finding out what drives their loyalty and their demographic characteristics can help Marriott tremendously.

Travel trends and destination hotspots

By furthering exploring travel trends and destination hotspots, Marriott can stay one step ahead of its competition and establish itself as the global leader in the hospitality industry. Identifying the potential of regions before competitors will give Marriott the edge.
